

Curcuma Forte & PEA

A unique pain relief combination

INFORMATION FOR PROFESSIONAL USE ONLY

Curcuma Forte & PEA

A unique pain relief combination

MHCURF60

60 Tablets

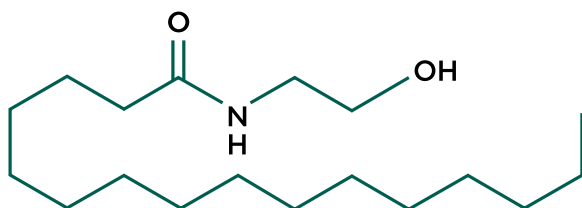

MediHerb Curcuma Forte & PEA contains a unique proprietary combination of curcumin and fenugreek galactomannans for enhanced bioavailability. Curcumin is an antioxidant, while PEA provides additional anti-inflammatory and analgesic activity. PEA is a naturally occurring endocannabinoid which affects endocannabinoid signalling. PEA achieves its analgesic effects via indirect activation of the cannabinoid 1 (CB1) and cannabinoid 2 (CB2) receptors; as well as indirect activation of PPAR-alpha, and several other receptors.

Indications

- ✓ Analgesic, pain relief
- ✓ Anti-inflammatory
- ✓ Antioxidant to reduce free radicals formed in the body

PEA Chemical Structure
