

Gamma-aminobutyric acid (GABA)

For Extemporaneous Compounding

Orthoplex White Gamma-aminobutyric acid (GABA) is a high quality, free flowing powder specifically formulated with a low excipient profile to improve dosing accuracy.

GABA in its pure raw material form is highly prone to absorbing moisture from the air, causing clumping and dosing variability. Microcrystalline cellulose and silica colloidal anhydrous have been purposely blended with GABA to maintain a free flowing powder and to provide greater accuracy with dosing.

- ✓ **Gluten Free**
- ✓ **Dairy Free**
- ✓ **Sulfite Free**
- ✓ **Soy Protein Free**
